U.S. Patent and Trademark Office PTOL-303 (Rev. 08-06)

Continuation of 11, does NOT place the application in condition for allowance because: The applicant argued that Foster does not teach deciding based on a job classification information of the input data. The examiner disagrees. Foster teaches functions of a job ticket service to store job tickets, and to provide access to the job ticket to users such as the client and to the processor. The job ticket controls the job ticket content access...instead of passing the job ticket to a processor, the job ticket passes the job ticket reference. The processor also may access all or a part of a job ticket sortion when the processor may access the job ticket service verifies that the processor may access the job ticket. Access may be controlled by a passowrd, an identification, and a public key/private key security system. (page 9, pp.96-99; aged 10, pp.108)

In response to applicant's arguments against the references individually, one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See In re Keller, 642 F.2d 413, 208 USPQ 871 (CCPA 1981); In re Merck & Co. 800 F.2d 1091; 231 USPQ 375 (Fed. Cir. 1986).

With respect to the applicant's argument that Russ, Saito and Foster are not analogous art, the examiner would like to point out all the references including applicant's invention relate to the transter of data with access protection in order to prevent unauthorized access. Therefore they are related to the same problem of data protection from unauthorized access.
